Interpretation Signage

DAC Group has produce digitally printed Interpretation Signage since 1997, with many such signs being deployed in extreme conditions on Department of Conservation tracks, wildlife parks and tourist locations.

Durable against the elements. Our products have proven durability against UV light and weather conditions for a minimum of 3 years with most signs exceeding 5 years in extreme locations. With minimal cover from buildings or not facing all day sun, graphics can have an unlimited life.

- We work with designers of Interpretation Signage and are members of the Interpretation Network of New Zealand - INNZ.
- Durability - a key factor. Constantly testing and evaluating new processes and materials.
- Cost of production - A key factor is cost of replacement or change-outs. As there is no totally vandal proof product, our philosophy is to produce signs simply, cost effective, and allow for easy change-outs on site.

Sign Solutions - *all tried and tested solutions*

- Plywood - 18mm painted, image bonded to front and clear sealed.
- Aluminium - 6mm powder coated panels, image bonded to front and clear sealed.
- Aluminium Frames - Graphics applied to 6mm Impact Acrylic, sandwiched within an Aluminium Frame System - easily changed acrylic panels.

Images & Designs by Janet Bathgate Design - all graphics produced by DAC
